

PowerKit ESP/PRP Diesel Engine

Baudouin.com

4M06 ESP/PRP Diesel Engine

Bore & Stroke (mm) 89 x 92
Displacement (L) 2.3
N° of Cylinders 4
Cylinders Arrangement In line

Fuel System High Pressure Common Rail/

Mechanical

Governor (Gov.) ECU/ Electronic Aspiration (Asp.) Naturally Aspirated

Turbocharged

Turbocharged & air-to-air cooled

Customer benefits

Warranty terms – 2 yrs unlimited PRP, 4 yrs/800h ESP 50°C Cooling package standard with low derating Low fuel consumption across the range Extended mean time between overhauls (MTBO)

Standard Equipment

5	Cast iron gantry type structure block				
Engine and block	One-piece forged crankshaft				
	Separate cast iron cylinder heads and wet liners				
	Aluminum alloy pistons with oil cooling gallery				
Cooling System	Radiator and hoses supplied directly mounted on the engine				
	Thermostatically-controlled system with belt drivencoolant pump and pusher fan				
Lubrication system	Flat bottom large capacity oil pan				
,	Spin-on full-flow lube oil filter				
Fuel system	P type fuel injection pump and injector for higher inject pressure,				
	for engines with electronic governor				
	High pressure Common Rail injection system, for engines with ECU Fine filter				
Attack to the language of the same of the	Special rear mounted air filter with restriction indicator				
Air intake and exhaust system	Exhaust manifold shield for heat isolating				
Electrical System	12V DC electric starter motor and battery charging alternator				
	LOP + HWT sensors				
Flywheel and housing	SAE 4 flywheel housing and 7.5" flywheel, for engines 4M06G20/5 & 25/5 and 4M06G20/6 & 25/6				
,	SAE 3 flywheel housing and 11.5" flywheel, for other engines

Ratings definitions

Emergency Standby Power (ESP)

Emergency Standby Power is the maximum power available for a varying load for the duration of a main power network failure. The average load factor over 24 hours of operation should not exceed 70% of the engine's ESP power rating. Typical operational hours of the engine is 200 hours per year, with a maximum usage of 500 hours per year. This includes an annual maximum of 25 hours per year at the ESP power rating. No overload capability is allowed. The engine is not to be used for sustained utility paralleling applications.

Prime Rated Power (PRP)

Prime Power is the maximum power available for unlimited hours of usage in a variable load application. The average load factor should not exceed 70% of the engine's PRP power rating during any 24 hour period. An overload capability of 10% is available, however, this is limited to 1 hour within every 12 hour period..

- All ratings are based on operating conditions under ISO 8528-1, ISO 3046, DIN6271. Performance tolerance of ±5%.
- Test conditions: 100 kPa, 25°C air inlet temperature, relative humidity of 30%, with fuel density 0.84 kg/L. Derating may be required for conditions outside these; please contact the factory for details.
